

AERATION

Hard, compacted soil and thatch take away your lawn's ability to breathe. They keep water and fertilizer away from the roots too. Let us open up your soil and help control thatch with power core aeration. We'll create thousands of growth pockets to catch water, air, and fertilizer and increase rooting. Order aeration now for a thicker and healthier lawn.

We Can Help Your Lawn Breathe Easier

Our power core aeration creates thousands of new growth zones throughout your lawn by removing 1" to 3" cores of soil. These cores eventually dissolve, helping to speed up the natural process of thatch breakdown. The holes left by aeration make more room for air, fertilizer and water to reach your lawn's roots. After aeration, your lawn will naturally expand toward the open pockets in the soil, resulting in healthier grass with thicker, deeper roots. Order this great service for your lawn today!
