

# Let Your Lawn Breathe!

Hard, compacted soils take away your lawn's breath. They keep water and fertilizer away from the roots, too. Let us open up your soil and help control thatch with power core aeration. We'll create thousands of growth pockets to catch water, air, and fertilizer and increase rooting.

**See back for a very special offer!**

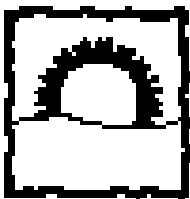

Power core aeration is one of the best things we can do for your turf. The process involves using an aerator to remove 1" to 3" cores of soil throughout your lawn. These cores are left behind to dissolve, helping to speed up the process of thatch breakdown. The holes made in your lawn as the cores are removed leave more room for air, fertilizer and water to reach your turf's roots.

After aeration, your lawn will begin to expand toward the open holes in the soil, resulting in healthier grass with thicker, deeper roots. Why not schedule power core aeration for your lawn today?

**Call now and we'll take  
\$25 off your first power  
core aeration!**
